One Child at a Time (OCaT)
LVCT Health implemented One Child at a Time (OCaT) programme for vulnerable children in informal settlements in response to the findings of this study. OCaT is a combination prevention intervention aimed at minimizing vulnerability and preventing new HIV infections and negative Sexual Reproductive Health (SRH) outcomes among vulnerable girls and boys below 18 years. It utilises individual and community approaches to address factors that put the children at risk.

☑ For $100, you can put a child back into school for one term ($300 per year)
☑ For $50, a child <18 years can prevent HIV and unwanted pregnancy
☑ $100 can provide seed funding for an OCaT group to start an income generating activity
☑ $10 can supply one girl with sanitary pads for a year

You can also:
• Provide basic supplies – sanitary pad, school books, stationery, uniform, shoes etc.
• Provide your time and expertise to improve the program
• Mentor a child or children in the programme
• Provide internship opportunities for the beneficiaries
• Mobilize resources for the project
